

FLAT SHEET

Barrier Cook-In Casing System

THE FUTURE OF CASING TECHNOLOGY

The future of cook-in casing technology is here...barrier casings formed in-line from rollstock film. Immediately, processors will realize increased productivity, reduced costs and added food safety benefits. Sealed Air's Cryovac Food Packaging Division, and Tipper Tie®, the leading name in sizer and clipper technology have combined decades of packaging experience to create this new twist for cook-in meats. Cryovac® barrier films join forces with the new Tipper Tie® HS3AB automatic heat sealing machine to form the wave of the future.

Flat Sheet Barrier Cook-In Casing System

Improves productivity through in-line forming

- Dramatically reduces interruptions in stuffing to reload casings
- Working from large rolls of rollstock reduces the frequency of line shutdowns to reload materials, resulting in up to a 33% increase in actual production time
- More continuous production also means less operator involvement

Rollstock Reduces Costs

- With the elimination of costly shirring, flat rollstock film can be significantly more cost effective
- Rollstock uses one-quarter of the inventory storage space of shirred casings
- Fewer roll change-overs means less material waste at thread-up

Food Safety Benefits

- When considering a transition from fibrous casings this system is ideally suited for barrier plastic casings, and is the most cost effective means to employ them

Versatility

- The Tipper Tie® HS3AB can run shirred casing product with only a ten-minute change-over by means of a patent pending “shirred casing module”
- Can seal up to a 27” (686 mm) web width
- Finished product diameters range from 1.75” (44.4mm) small chubs to 8.27” (210mm) large logs with a standard overlap seal
- The system has a progressively adjustable temperature and sealing speed

Discover all the benefits of the Cryovac® Flat Sheet Barrier Cook-In Casing System.
And see how our dedicated service and systems support can work for you today, and tomorrow.
